

The power of voice

VoCoVo Call Points

Designed for use with the VoCoVo Controller, the VoCoVo wireless Call Point allows customers to request assistance at the location and time it is needed. This device can be used in many different scenarios.

Touching the call button immediately generates an audible message that is sent to support colleagues via their VoCoVo wireless device. The message states the location where assistance is required.

The action taken in response to the button press is configured into the VoCoVo system. Voice messages, number of repeats, message priorities, and more are all remotely configured.
