PRODUCT BENEFITS & INFO

The Axon Assistant is an AI-powered voice assistant designed for frontline professionals, delivering real-time intelligence, communication and accountability where it is needed most, preventing language barriers and enabling clear, confident interactions to be carried out.

Axon Assistant places a powerful AI voice assistant directly into frontline operations through the Axon Body 4. With simple push-to-talk activation, officers can access real-time translations, field-specific guidance, and agency-approved information without taking their eyes off the scene or their hands away from operational tasks.

Designed for fast-moving environments, Axon Assistant helps remove communication barriers by enabling mutual understanding when a human interpreter is not immediately available. Through the body-worn camera, spoken conversations can be translated into audio across more than 50 languages, delivering clear communication within seconds.

By providing instant, hands-free translation and operational support, Axon Assistant enables officers to communicate confidently with members of the public, gather accurate information more efficiently, and maintain situational awareness during critical incidents.
